Detailed information about the KineMaster Corporation processor has developed this processor called KineMaster. This processor was released on December 26, 2013 at KineMaster's Google Play Store. This process has been downloaded by more than 10,00,000,000 people so far. You can currently download this processor from the Google Play Store for 75.78 MB. The processor has a rating of 4.4 out of 5 on the Play Store so far. Below you will find the advantages of this processor. How to use this entry template you can create your intro video with this template. You can only create an intro video with a logo and text. A unique feature is that it can be created with mobile devices. Working with this template is very simple. So everyone can use it to create an intro video for your YouTube channel MV Creation Tamil. How to use this black screen effect This effect helps make your video or photo look prettier. Let me tell you how to use it. There is a mixing option after you put this influence on photos or videos and select a video. You must select Screen and your video will be added to this effect. How to use this green screen effect With this effect you can make your photos or videos look great. There are many forms of this effect. Let me tell you how to use it. You should put the video at the top of your photo and choose an option called Chromo Key. Then everything as a result will be added to the top of your photo. KineMaster Premium Features Multiple layers You can add and edit your favorite videos and photos one by one in the KineMaster app. This feature is only available in the KineMaster application, although there are many processors. This way you can edit your favorite videos correctly. Handwriting This feature allows you to set some codes wherever you want videos. This makes it easier for viewers to watch your videos to show you what code you want to display. Chroma This chroma key setting is used to provide video background. The background of the video was the only art that could easily be presented. For example, if the background of the video is green, it's easier to remove. When you select a video color and remove it, select the key color as the same color. Only then can the background of the video be removable. Voice recording This processor also has the ability to record your voice where necessary while editing videos. The Google Play Store has many processors to record voice, but this processor has a voice recorder while editing videos. Voice change This option is used to change the original voice or make another voice in the video with a different voice. For example, the processor has features that make your voice sound as a robot can. Animation effects and transition effects Animation effects are used to Characters. The transition helps you have an impact on photos and videos. He Is He Use the animation at the beginning and the option at the end. Simply put, it can give effect at the beginning of the alphabet and effect when the spell disappears. Clip Graphics Use this option to create new effects in the middle of a video. For example, if you cut a video in the middle of a video, you can give it a new effect. This will mean the effects you have when you switch from one video to another. Then it would be great to watch the video. Because the effect you have when moving from one video to another will make this video beautiful. Extract audio It can also be a great feature because in this processor, when editing a video you do not have texts to video, but if you have video for that audio you can extract audio separately from the video and then delete the video that you do not want. Use this option to take the song you want without having to download a song. Export Quality With this processor you can edit videos up to 4K to 60fps. This will make it clear to watch your videos. Viewers can easily understand the information contained in the video. You can also transfer videos to your favorite format. For example, if you want 720p to 30fps, you can output videos of this size.
